Look at these four extracts from a computing textbook. Which criteria is the writer using to classify the networks he's describing?

1. **The most common examples of networks are LANs, PANs, MANs and WANs.**

   _____

2. **There are several languages that the computers on a network can use to communicate with each other. For example, the Internet uses TCP/IP.**

   _____

3. **A client-server network differs from a peer-to-peer network in several ways, the most important being that on a peer-to-peer network there is no need for a separate computer to act as a server.**

   _____

4. **The most common layouts for networks are bus, star and ring.**

   _____
